THE ALGORITHM

Master Revenue Architecture

The complete commercial system connecting products, engineering, markets, acquisition, expansion, team design and revenue scenarios.

GTM INTELLIGENCE LIBRARY

1. Executive commercial thesis

The Algorithm already has three product entry points and a broad engineering capability. The commercial opportunity is to connect these assets into one system that manufactures new-logo opportunities, expands successful accounts and converts project work into recurring relationships.

The architecture is deliberately built around four commercial stages: Land, Expand, Transform and Retain. The first engagement should be easy to understand and comparatively low-risk; account value should increase only after proof is established.

Products create entry. Engineering creates depth. Managed services create continuity. Customer success creates expansion.

2. Commercial assets

Engine	Assets	Commercial role
Product IP	clinIQ, Regure, SentienGuard	Focused entry into healthcare, insurance and infrastructure accounts
Engineering	AI, cloud, data, modernization, compliance, agentic AI, regulated technology	High-value transformation and project revenue
Managed	Managed infrastructure, AIOps, technical support	Recurring revenue and account retention
Distribution	Founder network, referrals, outbound, ABM, partnerships	Market access and pipeline creation

3. LAND - enter through one urgent problem

Land with the smallest credible commercial unit. The entry motion should be tied to a problem the buyer can recognize, quantify and sponsor without committing to a multi-year transformation.

- clinIQ: Clinic Operations & Revenue Assessment followed by workflow demo and pilot.
- Regure: Claims / document / insurance workflow assessment using the customer's actual operating process.
- SentienGuard: Infrastructure Autonomy Assessment, observation mode and controlled remediation.
- IT Services: focused modernization, AI, cloud, integration or specialist engineering project; resource augmentation where urgency makes staffing the simplest entry.

4. EXPAND - widen the footprint

Expansion should be designed into the original opportunity. Before the first contract closes, identify the most likely second use case, second department, additional location, integration or adjacent service.

- Product modules, users, sites and workflows.
- EHR/core-system/infrastructure integrations.
- Additional teams, workloads and business units.
- Adjacent product and engineering capabilities.

5. TRANSFORM - move to executive technology priorities

Once trust exists, move the conversation upward from operational workflow to strategic technology outcomes.

- Production AI and agentic AI.
- Cloud and data modernization.
- Legacy application modernization.
- Compliance and regulatory engineering.
- Enterprise integration and platform engineering.

6. RETAIN - convert delivery into recurring value

Every project leaves an operational estate. Managed infrastructure, technical support, AIOps and structured customer-success governance can turn one-time delivery into a recurring relationship.

7. Market prioritisation

Market	Priority	Primary opportunity	Initial posture
North America	P1	Healthcare, insurance, SaaS/FinTech, regulated enterprise	Primary outbound and account-based revenue engine
United Kingdom	P1	Insurance, financial services, regulated enterprise	Regure + regulated engineering / cloud / compliance
UAE / Gulf	P2	Healthcare, government, financial services, AI/cloud	Relationship-led enterprise selling and partnerships
India	P2	Technology, enterprise, engineering partnerships	Selective revenue + delivery ecosystem

8. Account acquisition engine

We do not build lists. We build account intelligence. Each target account should be scored against fit, trigger, pain, access and commercial potential.

Stage	Question
ICP	Does this organization match the product/service profile we want?
Trigger	Why might it buy now?
Research	What do we know about its technology, growth and operating context?
Buyer map	Who owns budget, pain, technical validation and risk?
Outreach	What point of view earns a conversation?
Discovery	What is the measurable impact of the current state?
Business case	Can the buyer defend the investment internally?

Stage	Question
Solution	What is the smallest viable first engagement?
Close	What risks, procurement steps and stakeholders remain?
Expand	What is the next revenue path if value is proven?

9. Cross-sell architecture

Entry	Expansion	Transformation	Recurring
clinIQ	Sites, modules, EHR integrations	Healthcare engineering, AI/data, cloud	Managed infrastructure / support
Regure	Claims, documents, workflow modules, core integration	Insurance engineering, AI, compliance, cloud	Managed infrastructure / support
SentienGuard	Endpoints, environments, workloads	Cloud/platform engineering, modernization	Managed infrastructure / AIOps
IT Services	More workloads / teams	AI, cloud, modernization, data	Support / managed services

10. Commercial operating model

Function	Ownership
Strategy	Market, ICP, offer and positioning
Pipeline	Account intelligence, outbound, ABM and partner sourcing
Sales	Discovery, solution alignment, proposal, negotiation and closure
Customer Success	Adoption, value realization, feedback and renewal
Expansion	Cross-sell, upsell and account-development plans
Partnerships	Technology, channel and ecosystem routes
Revenue Intelligence	Forecast, conversion, sales-cycle and market-feedback analytics

11. 90 / 180 / 365 execution roadmap

Horizon	Objective	Core outputs
0-30 days	Understand and instrument	Customer/pipeline audit, ICP validation, messaging, target accounts, CRM stages, baseline metrics
31-90 days	Activate and prove	Outbound campaigns, assessments, discovery, pilots, proposals, qualified pipeline
90-180 days	Build repeatability	Documented sales plays, partnerships, expansion motion, first hires where justified
180-365 days	Scale what converts	Vertical/market pods, customer-success cadence, forecasting, recurring revenue and cross-sell

12. Illustrative revenue scenarios

Scenario	Illustrative annual new revenue	Purpose
Foundation	~USD 0.9M	Validate the commercial system and identify repeatable motions
Base	~USD 2.5M	Demonstrate product + services + expansion traction
Scale	~USD 5.9M	Illustrate what a scaled multi-engine model could look like

Planning assumptions are illustrative only and must be validated against The Algorithm's actual pricing, pipeline, customer base, margins and conversion data before being used as forecasts or commitments.

13. Revenue scorecard

Layer	Key measures
Pipeline	Qualified opportunities, pipeline value, stage conversion, coverage
Sales	Win rate, average deal value, sales cycle, bookings
Product	Trial/pilot conversion, adoption, expansion, retention
Services	Proposal-to-win, project value, expansion, repeat business
Customer	Time-to-value, renewals, NRR, references
Market	Pipeline and win rate by geography, vertical and offer

14. Leadership principle

The commercial organization should not be scaled before the motion is proven. Start with commercial ownership plus technical/founder support. Add BDR/SDR, AE, solutions and customer-success capacity only when conversion data demonstrates where leverage will pay back.

We are not building a sales pipeline around The Algorithm. We are building a revenue architecture around its technology, engineering capability, products, markets and customer relationships.
