

The Algorithm Commercial Growth Architecture V2.3

A unified operating system for products, regulated engineering, account
intelligence and expansion

V2.3 Research Edition

Evidence-led strategy. No revenue forecast. Internal validation required where noted.

Strategic thesis

We are not building a sales pipeline around four disconnected offerings. We are building one commercial architecture around The Algorithm's products, engineering capability, markets and customer relationships. Products create entry. Implementation creates insight. Engineering creates depth. Managed infrastructure creates continuity. Customer success creates expansion.

1. What is known and what is not

Known	Unknown / CEO Input Required
Three product engines: clinIQ, Regure, SentienGuard; broad regulated-engineering capability	Current product customer counts, ARR/MRR, current services revenue, margins and churn
Approximately 10 IT services clients mentioned in discussion	Client identities, scope, expansion potential, references and case-study proof
Historic acquisition described as network/referral-led with limited outbound	Current qualified pipeline, win/loss, conversion rates, average cycle and stage definitions
Priority markets for this architecture: US/UAE first, UK/India second	Where current proof, partner leverage and existing pipeline are strongest

2. Unified commercial operating system

Stage	Question	Output
UNDERSTAND	What exactly are we selling and where is it strongest?	Product/service intelligence, proof audit, ICP, information gaps
PRIORITIZE	Where should we spend scarce selling time?	Market, vertical and account prioritization
IDENTIFY	Why this account and why now?	Verified trigger, tech clues, account hypothesis
ENGAGE	How do we earn executive attention?	Value-first outreach and micro-value asset
DIAGNOSE	Is there a business case worth solving?	SPICED discovery, economic impact, critical event
CONVERT	Can we satisfy decision, technical and paper process?	MEDDPICC, validation, proposal, negotiation
EXPAND	What legitimate next problem becomes visible?	Modules, sites, workflows, engineering, managed services
RETAIN	How do we keep value visible and the relationship durable?	Success governance, renewal, referenceability

3. Four commercial engines

Engine	Simple understanding	Best first conversation	Expansion bridge
clinIQ	Operational layer around the clinic journey and EHR	Patient flow, intake, RTM, pre-auth, multi-site operations	Healthcare engineering -> data/AI -> cloud -> managed infrastructure
Regure	Insurance workflow/document intelligence around core platforms	Claims/document friction, core workflow gaps, compliance evidence	Insurance engineering -> AI/compliance -> cloud
SentienGuard	Remediation layer after monitoring	SRE toil, repetitive incidents, controlled autonomy	Fleet -> cloud/platform engineering -> managed operations
Regulated Engineering	Compliance-native outcome ownership for difficult technology problems	Specific modernization/AI/compliance/cloud trigger	Broader transformation -> managed infrastructure -> relevant product

4. Cross-sell flywheel

Entry	Expansion	Transformation	Retention
clinIQ module / site	More sites + modules + EHR integration	Healthcare AI/data/cloud engineering	Customer success + managed infrastructure
Regure workflow	More documents/LOBs/core integration	Insurance AI + compliance + cloud	Workflow optimization + managed ops
SentienGuard free/team	Fleet / multi-environment	Self-healing infrastructure + cloud transformation	Managed infrastructure
Engineering project	Adjacent workloads / teams	Multi-workstream transformation	Managed operations + product introduction where fit

Cross-sell rule

Never cross-sell because we have another capability. Cross-sell when customer evidence exposes the next legitimate business problem.

5. Trigger-based acquisition engine

- ICP tells us WHO.
- Verified trigger tells us WHEN.
- Account intelligence tells us WHY.
- Buying-committee mapping tells us WHO TO ENGAGE.
- Discovery tells us whether the hypothesis is actually true.

Offer	Example triggers
clinIQ	Clinic expansion/acquisition; specialty growth; patient access/RCM/EHR initiative
Regure	Guidewire/Duck Creek transformation; claims AI program;

Offer	Example triggers
	regulatory/audit event
SentienGuard	Kubernetes/cloud growth; reliability/on-call pressure; compliance/change-control requirement
Engineering	Failed modernization; production AI commitment; regulated cloud/compliance re-architecture

6. 100-point account score

Dimension	Weight	Audit rule
Fit	25	ICP, vertical, scale, geography, technology compatibility
Trigger validity	25	Evidence quality, recency, relevance and critical event
Identifiable pain	20	Economic significance, public evidence, measurability
Access	15	Named buyers, relationship path, contactability
Expansion potential	15	Land, product/service adjacency, managed-services and strategic-account potential

- Tier A: 80-100, with a strong trigger and named buyer. Deep account plan and multi-threaded outreach.
- Tier B: 60-79. Targeted nurture and trigger monitoring.
- Tier C: 40-59. Monitor. Do not consume heavy technical presales time.
- No trigger, no Tier A.

7. Strategic discovery and business-case scoping

Operating rule

No demo before diagnosis. No proposal before quantified impact. No forecast without a critical event and buying process.

Method	Role
SPICED	Diagnose situation, pain, impact, critical event and decision
MEDDPICC	Inspect enterprise deal quality, buyer power, decision/paper process and competition
Challenger	Teach with account-specific insight and reframe status-quo inertia
SPIN	Lighter conversational questioning for SMB/mid-market product discovery
PQA / PLG	SentienGuard usage signals that justify sales engagement

8. Five-stage pipeline discipline

Stage	Exit criteria	Forecast treatment
1 Qualified Problem	Problem, owner, reason now, next step	Pipeline only
2 Business Case Validated	Baseline, impact, critical event, economic buyer/champion	Qualified pipeline
3 Solution & Technical Validation	Fit, scope, security/compliance, acceptance criteria, buying process	Upside / probable when path is real
4 Commercial Commitment	Proposal, economic-buyer review, paper process, signature date, remaining risks	Commit candidate
5 Closed / Implementation	Signed agreement/PO, owner, kickoff, baseline and success criteria	Closed Won

- No next step = no active opportunity.
- No critical event = weak urgency.
- No economic buyer = not commit.
- Demo does not equal progress.
- Proposal does not equal late-stage deal.
- Technical success does not equal commercial success.

9. Existing-customer expansion

- Audit the installed base before assuming net-new logos are the only growth path.
- Account map: current relationship -> value already delivered -> stakeholders -> upcoming initiatives -> adjacent problem -> product/engineering/managed-services fit -> executive question.
- Treat existing client knowledge as a commercial asset, but do not manufacture cross-sell until internal account detail is available.

10. Partner and ecosystem GTM

Engine	Ecosystem routes
clinIQ	EHR/PAS ecosystem, healthcare consultants, RCM, specialty-practice networks
Regure	Guidewire, Duck Creek, Sapiens, Applied Epic, insurance consultants, MGAs/TPAs
SentienGuard	Cloud/Kubernetes, observability, MSP, SRE/platform communities
Engineering	Hyperscalers, enterprise platforms, specialist consultancies, regional partners

11. Commercial readiness and proof audit

Readiness area	Status
Referenceable customers and quantified case studies	CEO Input Required

Readiness area	Status
Security / compliance documentation	Validate by product/service
Integration readiness	Validate current production scope
Pricing and packaging	CEO Input Required
Demo / sandbox readiness	Validate
Implementation/support capacity	CEO Input Required
Proposal/SOW/change-control templates	Validate
Product roadmap boundaries	CEO Input Required

12. Market prioritization

Priority	Market	Commercial role
1	United States	Largest immediate opportunity pool across all engines; proof-heavy and competitive
1	UAE	Relationship-led regulated enterprise market; strong healthcare, financial services, AI/cloud intensity
2	United Kingdom	Strong regulated insurance, financial services, healthcare and government fit
2	India	Selective revenue in technology/GCC/enterprise and partnerships; clinIQ excluded

13. Commercial traction and leading indicators

Metric family	Examples
Account Intelligence	Tier-A accounts, verified triggers, buyer maps, hypotheses
Engagement	Executive conversations, technical conversations, response by play
Qualification	Qualified opportunities, economic buyers, critical events, validated business cases
Conversion	Assessments, pilots, proposals, negotiations, wins where cycle permits
Expansion	Additional sites/modules/workloads, account reviews, cross-sell conversations
System Maturity	Win/loss analysis, objections, case studies, CRM hygiene, forecast accuracy, partner pipeline

14. 180-day single-owner execution plan

Period	Focus	Output
Days 1-30	VALIDATE	Internal commercial audit, proof/pricing validation, customer/account review, ICP and priority
Days 31-60	BUILD	Account database, triggers, buyer maps, messaging, value assets, discovery and CRM stages
Days 61-90	CREATE QUALIFIED TRACTION	Executive outreach, discovery, assessments, technical workshops, early proposals
Days 91-120	CONVERT	Business cases, pilots, technical/commercial validation, procurement movement
Days 121-150	EXPAND & REFINE	Existing-account expansion, cross-sell, case-study creation, win/loss refinement
Days 151-180	SYSTEMIZE	Repeatable motions, account scoring, pipeline governance, CS/expansion cadence, next-phase recommendation

15. Commercial ownership

- Market strategy -> ICP -> account intelligence -> prospecting -> executive outreach -> discovery -> business case -> solution alignment -> proposal -> negotiation -> closure -> implementation handoff -> customer success -> expansion -> partnerships -> product-market feedback -> revenue intelligence.
- New-logo acquisition is only one growth lever. Existing-account expansion, partnerships, customer success, product feedback and cross-sell are part of the same commercial responsibility.

16. Evidence from prior deal execution

Reference	Commercial evidence
TC+ LIMS - Pump Testing & Gauge Room	Requirements, workflow automation, positioning, technical coordination: Testing traceability, centralized quality workflows, compliance visibility
ATL Labs	Discovery, workflow mapping, SaaS LIMS positioning, implementation discussions: Digitized operations, sample tracking, reporting
Suhana Foods	Quality workflow discovery, digital process design, adoption support: Quality tracking, batch visibility, reduced manual reporting
Guidewire resource augmentation	Requirements, staffing solution, technical discussions, customer lifecycle: Delivery acceleration and flexible specialist capacity
Openlink ETRM partnership	Niche resource discovery, engineering capability alignment: Specialist delivery support
B2B marketplace	Discovery, AI marketplace positioning, technical coordination,

Reference	Commercial evidence
	closure: Buyer/supplier platform and analytics
AI Translation Bot	Opportunity identification, AI/NLP positioning, requirements, technical coordination: Real-time multilingual workflows and API integration

17. CEO Commercial Discovery Workspace

- Top three commercial priorities for 12 months.
- Which products/services should be scaled first and why?
- Current customer count and ARR/MRR/contract value by product.
- Current services clients by industry, service line and expansion potential.
- Current qualified pipeline, deal sizes, cycles, margins and pricing models.
- Why do we win, stall or lose?
- Which case studies/outcomes can be used publicly?
- What product/security/integration gaps slow deals?
- What delivery capacity exists if pipeline increases?
- Which partnerships/certifications are active?
- What would successful commercial traction after 180 days look like?
- What should the commercial leader own independently and where should technical leadership remain involved?

18. What we will not claim

- No predictable revenue forecast without internal baselines.
- No named account buying intent without discovery.
- No vendor metric presented as universal customer proof.
- No capability, integration, certification or roadmap item sold without internal validation.
- No large sales-team hiring plan before one or two repeatable motions are evidenced.

19. Enterprise Monetization & Account Expansion Architecture

The public price is not the strategy. The strategy is to understand the lowest-risk enterprise entry, prove customer-specific value, identify the variables that legitimately increase account scope, and then expand only when scale, complexity, governance, integration or operational ownership demands it.

Engine	Industry focus	Enterprise entry wedge	Primary value / scale variables	Enterprise graduation	Account depth
clinIQ	Specialty/multi-location outpatient healthcare; behavioral health, rehab/pain, surgery/procedures, urgent/primary/specialty care	Clinic Operations & Revenue Assessment -> one workflow/site	Patient volume, locations/providers, modules, EHR/API complexity, SLA/support	Unlimited patients, pre-auth, custom integrations, dedicated success/SLA	Healthcare integration -> data/AI -> cloud -> managed infrastructure
Regure	Brokers, MGAs, carriers, TPAs, Lloyd's/specialty insurance,	One claims/document workflow or guided pilot	Users plus workflow/LOB complexity, custom APIs,	200+ users / Enterprise requirements / custom	Insurance engineering -> compliance/AI/data -> cloud

	compliance		private cloud, governance/support	development / private cloud	
SentienGuard	SaaS, FinTech, HealthTech, e-commerce/digital platforms, regulated infra, MSPs	3-node/Team technical validation on contained workload	Endpoints, environments, organizations/tenants, RBAC, audit retention, support	Fleet/MSP multi-tenancy, custom RBAC, extended audit, 24/7 support	Self-healing/cloud engineering -> managed infrastructure
Regulated Engineering	Regulated healthcare, insurance/financial services, technology and complex enterprise modernization	Assessment or surgical-strike engineering problem	Defined scope, business impact, compliance complexity, delivery outcome	Broader program only after contained value is proven	Managed operations and product introduction where fit

Pricing discipline

Do not default to one pricing ideology across products. clinIQ currently scales public packaging by patients/month; Regure currently prices by users; SentienGuard prices by endpoints. Enterprise selling should respect the documented base metric and add value around scale, complexity, integration, governance and support.

Do not lead CEO-facing strategy with low monthly prices. Show the account path: Entry -> Proof -> Enterprise Requirement -> Expansion -> Engineering / Managed Services.

Never invent enterprise ACV, gross margin or 'multi-million-dollar' pipeline claims. These remain Executive Input Required until leadership validates internal economics.
