

Regure GTM Playbook V2.3

Insurance operations intelligence around the core platform

V2.3 Research Edition

Evidence-led strategy. No revenue forecast. Internal validation required where noted.

Executive understanding

Regure can run as a claims platform or sit alongside existing insurance cores. Its strongest enterprise wedge is non-invasive document intelligence, workflow orchestration and collaboration around systems such as Guidewire and Duck Creek. That creates a practical 'modernize around the core' motion instead of forcing rip-and-replace.

1. Commercial thesis

- Start with a specific document-heavy workflow or claims bottleneck, not 'AI for insurance'.
- Use SPICED to establish impact and critical event, MEDDPICC to inspect enterprise buying risk, and Challenger principles to reframe the assumption that every workflow must be customized inside the core system.
- Core question: what still happens in email, documents, spreadsheets, portals or manual exception queues outside the system of record?

2. ICP and buyer committee

Segment	Best-fit profile	Economic buyer	Technical buyer	Operational champion
SMB / growth	MGAs, coverholders, TPAs, specialty brokers with document-heavy claims	CEO / COO / Claims Director	CTO / IT lead	Claims Operations
Mid-market	Regional/specialty insurers, carriers, TPAs, brokers	COO / Chief Claims Officer	CIO / Enterprise Architecture	Claims Transformation lead
Enterprise	Large carriers or Lloyd's ecosystem participants with contained workflow gaps around a core	Chief Claims / COO	CIO / Architecture / Security	Claims or Compliance program owner

3. Trigger log

Trigger	Verify	Hypothesis	Entry
Guidewire / Duck Creek / core transformation	Cloud migration, ClaimCenter/Claims rollout, integration program	Adjacent document/workflow work may remain outside the core	Core Workflow Extension Assessment
Claims AI / automation program	Claims transformation, AI hiring, document automation initiative	A contained document/process layer may prove value without destabilizing the core	Claims Workflow Friction Assessment
Regulatory / audit / resilience initiative	DORA, FCA Consumer Duty, market conduct, audit remediation	Evidence assembly and workflow traceability may be manual	Compliance Evidence Workflow Review

4. Adjacent monopoly boundary

Incumbent	Keep it for	Regure role	Sales message
Guidewire ClaimCenter	Claim lifecycle, reserves, payments, core record	Documents, extraction, workflow, collaboration, selected intelligence	Do not replace the core. Extend the workflows around it.
Duck Creek	Policy, billing and claims core	Document automation, workflow, field/vendor collaboration	Preserve the core investment and remove work happening beside it.
Email / DMS / spreadsheets	Unstructured communication and storage	Classify, route, extract, audit and orchestrate	Turn invisible manual work into a measurable process.

5. Competitive intelligence

Competitor	Strength	Regure wedge	Risk
Sprout.ai	Claims AI and automation specialization	Broader workflow/core coexistence where Regure capability is validated	Do not compete on 'better AI' without benchmark evidence
Five Sigma	AI-native claims management system	Stronger fit when buyer wants augmentation rather than full claims-core replacement	Qualify replacement vs extension early
Hyperscience	High-volume document automation	Insurance workflow/orchestration and core integration around document intelligence	If the problem is only extraction, a specialist document platform may fit better
Build inside core	Incumbent trust, one platform	Faster bounded workflow layer and reduced custom-core burden	Must prove integration and governance discipline

6. Business-case quantification

Leak	Inputs	Annualized model
Document labor	Documents/year, manual minutes/document, loaded rate	Volume x minutes / 60 x loaded rate
Claims backlog labor	Backlog claims, manual hours/claim, loaded rate, recurrence	Backlog x hours x rate; annualize recurring burden
Compliance evidence prep	Internal hours + external consultant cost + remediation effort	Annual internal + external preparation cost
Claims leakage / missed recovery	Use only customer-verified data	Do not import generic leakage percentages into the CFO case

7. Sales process

Stage	Exit evidence
Qualified Problem	Verified trigger, workflow pain hypothesis, owner identified, next step scheduled
Business Case Validated	Baseline metric, impact, critical event, economic buyer/champion identified
Solution & Technical Validation	Document sample/workflow workshop, system boundary, security/integration fit, acceptance criteria
Commercial Commitment	Scope, price, paper process, target signature date, remaining risks
Closed / Implementation	Contract/PO, implementation owner, baseline, success criteria, expansion hypotheses

8. Land -> Expand -> Transform -> Retain

- LAND: one claims/document workflow, line of business or delegated-authority process.
- EXPAND: more document classes, claims workflows, portfolios, teams and portals.
- TRANSFORM: custom insurance AI, Guidewire/core engineering, compliance architecture, data and regulated cloud.
- RETAIN: workflow optimization, managed infrastructure, support and strategic account governance.

9. Commercial readiness

Need to validate	Why it matters
Referenceable deployments and customer outcomes	Enterprise proof and competitive credibility
Production accuracy/exception rates by document/workflow	Business case and implementation risk
Supported core versions / integration architecture	Technical qualification
Security certifications / data residency / audit evidence	Enterprise procurement
Pricing and packaging	Business case and sales cycle
Product roadmap vs custom-engineering boundary	Avoid turning every requirement into bespoke product work

10. Market opportunity context

- Global insurance analytics was estimated at \$15.8B in 2025 and \$18.0B in 2026. Claims management is one application within that broader category.
- U.S. insurance analytics generated about \$4.0B in 2025 according to Grand View Research.
- Use these as demand proxies only. Regure's actual serviceable market depends on carrier/MGA/TPA fit, claims workflow scope, existing cores and procurement readiness.

11. Real target-account intelligence examples

These are research targets based on current public signals. They are not confirmed opportunities or evidence of buying intent.

QBE / Beazley in the Lloyd's market

Fact: The Lloyd's Market Association's 2026 claims update identifies QBE and Beazley as participants in a pilot for secure collaboration on singleton claims.

Commercial hypothesis: Active experimentation in claims collaboration shows modernization appetite, but also means any Regure approach must identify an unserved workflow rather than duplicate an existing pilot.

Discovery question: Which claims-document or collaboration workflows remain outside the scope of the current modernization initiatives?

IndiaFirst Life

Fact: In August 2026 IndiaFirst Life announced Agentforce use across underwriting, customer service and claims, including claims document verification and exception routing.

Commercial hypothesis: The active AI program is a strong trigger, but Salesforce is already an incumbent. Regure would need to complement a remaining claims/core workflow gap rather than compete with work already covered.

Discovery question: Which document-heavy claims workflows still require manual handling or core-system handoffs after the current Agentforce scope?

Enterprise Monetization & Account Expansion Architecture

Industry Focus

Industry focus: brokers/agencies, MGAs, carriers, TPAs, Lloyd's/specialty insurance and compliance teams. Current public solution pages cover property claims, auto claims, health claims, casualty/liability, commercial lines and catastrophe claims across US, UK/Ireland, EU and Middle East use cases.

Documented pricing architecture

Pricing / packaging element	What it means commercially
Starter: \$75/user/month, 10-50 users	Base pricing for small MGAs/brokerages/TPAs. Includes document processing, limited workflows, RBAC and API access.
Professional: \$150/user/month, 50-200 users	Unlimited custom workflows, SLA routing, collaboration, 9-role RBAC, multi-region data residency and onboarding.
Enterprise: \$225/user/month, 200+ users	Adds custom workflow development, white-label portal, fraud module, surge capacity, dedicated success, 24/7 support, custom APIs, private cloud and annual security testing.
Annual / volume economics	15% annual discount; up to 20% discount for 200+ users / multi-year commitments.
Guided pilot	14-day pilot for up to 10 users with onboarding; a strong low-risk entry mechanism.

Enterprise entry and proof

Step	Commercial design
1. Trigger-led wedge	One claims/document workflow, one department or line of business around an existing core.
2. Guided proof	Use the documented guided pilot or a contained workflow workshop to establish baseline and adoption.
3. Operational expansion	More users, claims teams, lines of business, custom workflows and SLA routing.
4. Enterprise graduation	200+ users, custom APIs, private cloud, white-label portal, advanced governance/support or multi-entity

	operations.
5. Account depth	Custom insurance engineering, compliance architecture, AI/data or cloud only when Regure configuration no longer solves the requirement cleanly.

Enterprise value drivers and expansion triggers

Value driver / trigger	Enterprise implication
User count	Current base pricing is explicitly per-user. Do not reject or hide this fact.
Workflow / LOB complexity	Professional and Enterprise tiers expand custom workflow capability and routing complexity.
Custom API requirements	Enterprise custom API development creates a direct integration/engineering value driver.
Private cloud / data control	Customer AWS/Azure tenant deployment is a clear enterprise requirement.
Regional / entity complexity	Multi-region data residency is included at Professional/Enterprise; multi-entity processes still increase operational and configuration scope.
Support / security governance	24/7 support, dedicated success and annual security audit/pen testing differentiate Enterprise.
Expansion trigger	Core modernization, claims AI program, new LOB/region, claims-volume growth, compliance initiative, acquisition.
CEO Input Required	Actual enterprise ACV, custom-development pricing, gross margin, historical expansion and services attachment.

Enterprise sales rule

Do not lead with the lowest public price. Lead with the business problem, prove value in a contained scope, then expand only when customer scale, complexity, governance, integration or operational ownership creates a legitimate enterprise requirement.

Do not invent ACV, gross margin, discount bands or large-contract claims. Where these are not documented, mark them Executive Input Required.

Updated pricing source: Regure official Pricing page, accessed Aug 2026 - \$75/\$150/\$225 per user/month, guided pilot, volume discounts, custom workflows/APIs/private cloud in Enterprise.
