

THE ALGORITHM

Executive Strategy Brief

A concise boardroom summary of the commercial thesis, priorities and operating sequence.

GTM INTELLIGENCE LIBRARY

Confidential strategic working document. Verified company information, proposed GTM strategy, personal experience and illustrative planning assumptions should be distinguished when used externally.

1. The opportunity

The Algorithm has more commercial assets than a traditional IT services company: proprietary products in healthcare, insurance and infrastructure; engineering capabilities across AI, cloud, data and modernization; and managed infrastructure/support capabilities. The opportunity is to connect them into one repeatable revenue model.

2. What changes

Current tendency	Proposed commercial system
Relationship / referral-led opportunity flow	Referral + outbound + ABM + partnerships
Capability-led conversations	Trigger-led problem conversations
One-off project closure	Land → Expand → Transform → Retain
Sales handoff	End-to-end commercial ownership
Team growth by assumption	Team growth after motion validation

3. Four revenue engines

clinIQ enters healthcare through clinic operations; Regure enters insurance through operational workflows around core systems; SentienGuard enters cloud-native accounts through infrastructure toil and remediation; The Algorithm engineering business captures larger transformation programmes.

4. Where we play first

Market	Primary focus
North America	Healthcare, insurance, SaaS/FinTech, regulated enterprise
UK	Insurance, financial services, regulated technology
UAE/Gulf	Healthcare, government, financial services, AI/cloud
India	Technology, engineering ecosystem, selective enterprise

5. How we acquire accounts

ICP → trigger → account research → buyer mapping → executive outreach → discovery → business case → solution → proposal → close → expand.

6. First 90 days

Validate the ICPs, audit current customers and pipeline, establish sales stages, create target-account universes, launch controlled market tests, measure qualified pipeline and determine which product-market-message combinations deserve scaling.

7. Commercial leadership model

The role is not appointment generation. It combines GTM, enterprise sales, account expansion, partnerships, customer success and product-market feedback. The objective is revenue ownership across the commercial lifecycle.

8. Planning scenarios

Foundation	Base	Scale
~USD 0.9M	~USD 2.5M	~USD 5.9M

Planning assumptions are illustrative only and must be validated against The Algorithm's actual pricing, pipeline, customer base, margins and conversion data before being used as forecasts or commitments.

9. Executive conclusion

The next stage is not about doing more sales. It is about building a system that makes growth repeatable.
