

THE ALGORITHM

The Algorithm IT Services GTM Playbook

Problem-led engineering plays, account research, discovery, commercial closure and strategic expansion.

GTM INTELLIGENCE LIBRARY

Confidential strategic working document. Verified company information, proposed GTM strategy, personal experience and illustrative planning assumptions should be distinguished when used externally.

1. Commercial thesis

The Algorithm IT services should be sold as engineering outcomes for regulated technology problems, not as a generic pool of developers. Staffing/resource augmentation remains a valid entry motion when a client has an urgent specialist requirement, but the larger proposition is defined technology outcomes across AI, modernization, cloud, data, compliance and managed infrastructure.

Sell the funded problem, not the capability catalogue.

2. Service portfolio

Commercial play	Typical trigger	Entry offer
Legacy modernization	Technical debt, unsupported platform, stalled transformation	Modernization diagnostic / focused modernization project
Production AI	AI pilot cannot reach production	Production AI acceleration / pilot
Compliance engineering	Audit, regulatory requirement, regulated workload	Compliance-by-architecture assessment
Regulated cloud	Migration, scale, cloud complexity	Cloud modernization assessment
Agentic AI	Need for autonomous workflows	Agentic AI discovery / prototype
Managed infrastructure	Platform-team overload, incident burden	Infrastructure autonomy / managed assessment
Resource augmentation	Urgent niche skill requirement	Specialist team/resource deployment

3. Priority ICPs

Vertical	Primary buyers	Relevant plays
Healthcare	CIO/CTO, Digital, Product, Operations	Modernization, AI, integration, cloud, compliance
Insurance	CIO/CTO, Claims/Operations, Transformation	Core integration, AI, modernization, data, staffing
Financial services	CIO/CTO, Engineering, Risk	AI, cloud, compliance, data, modernization
Government	Digital/IT leadership	Modernization, cloud, AI, managed infrastructure
Technology/SaaS	CTO, VP Engineering, Platform	Product engineering, cloud, AIOps, AI
Energy / enterprise	CIO/CTO, transformation leadership	Modernization, data, integration, specialist engineering

4. Market strategy

Market	Priority	Primary route
North America	P1	Trigger-led ABM + referral network + partners

Market	Priority	Primary route
United Kingdom	P1	Insurance/financial-services ecosystem + enterprise ABM
UAE/Gulf	P2	Relationships, local partners, executive networking and strategic accounts
India	P2	Delivery advantage + selective enterprise + specialist staffing/projects

5. Trigger library

- New CIO/CTO or transformation leader.
- Funding or acquisition.
- Legacy platform end-of-life.
- Cloud migration or data-centre exit.
- AI initiative moving from experiment to production.
- Compliance deadline or audit finding.
- Major outage / infrastructure-reliability programme.
- Guidewire/core platform implementation or upgrade.
- Rapid hiring for scarce technology skills.
- Vendor dissatisfaction or failed programme.

6. Account-intelligence model

For every target account, capture industry, market, technology stack, current vendors, active transformation signals, likely buying committee, pain hypothesis, product fit, services fit, relationship status and expansion potential.

Score	Weight
ICP fit	25%
Trigger	25%
Pain	20%
Access	15%
Expansion potential	15%

7. Outbound / ABM strategy

- Build narrow 25-account strategic lists before broad 100-account lists.
- Develop a specific point of view for each trigger and industry.
- Use email + LinkedIn + referral + partner paths, but anchor on the same problem hypothesis.
- Multi-thread into economic, functional and technical buyers.
- Use founder/technical leadership selectively where credibility increases conversion.
- Measure qualified opportunity creation, not activity volume.

8. Discovery framework

- What business outcome is blocked by the current technology state?

- Why is this important now?
- What has already been attempted?
- What is the cost/risk of doing nothing?
- Which teams and systems are involved?
- How will the buyer measure success?
- What budget/initiative already exists?
- Who owns technical validation, procurement and executive approval?
- What is the smallest first engagement that creates proof?

9. Qualification

- Problem is material and time-bound.
- Economic/functional sponsor exists.
- Technical feasibility is plausible.
- There is a route to budget or funded initiative.
- Decision process and stakeholders are mapped.
- A first engagement can be scoped with clear outcome.
- Expansion path exists if the work succeeds.

10. Solution and proposal architecture

- Executive problem statement and quantified impact.
- Defined outcome and scope.
- Architecture / delivery approach.
- Team and governance.
- Timeline and milestones.
- Assumptions / dependencies.
- Commercial model.
- Success criteria.
- Expansion options after phase one.

11. Commercial model

Motion	When to use	Commercial logic
Focused project	Urgent bounded outcome	Fast entry, clear scope, proof generation
Time & materials / augmentation	Variable scope or urgent capability gap	Flexibility and speed; use as entry, then expand
Dedicated team	Ongoing product/engineering roadmap	Longer relationship and capacity continuity
Managed service	Operational estate / run support	Recurring revenue, defined SLA and governance
Product + services	clinIQ/Regure/SentienGuard accounts	License/subscription plus integration, engineering and managed expansion

12. Deal-size strategy

Use personal historical experience of USD 20K-50K services projects as proof of operating familiarity, not as The Algorithm pricing. A practical commercial ladder is to use focused entry projects to establish trust, then pursue USD 50K-250K expansions and larger strategic programmes only when the buyer problem and internal delivery model support them.

13. Objection handling

Objection	Response direction
"We already have a vendor."	Find the outcome/workload the incumbent is not solving; do not force a full replacement.
"You are not a large consulting firm."	Sell senior access, speed, specialization, defined outcomes and lower delivery bureaucracy.
"We only need resources."	Solve the urgent staffing need, then use delivery insight to identify broader outcome opportunities.
"We cannot trust a new provider."	Start with a bounded proof, transparent governance and measurable milestones.
"Price is higher than offshore staffing."	Reframe from hourly rate to outcome, seniority, risk and total programme cost.

14. Closing and procurement

- Map legal/security/procurement before final proposal.
- Secure technical and business champions.
- Document decision criteria and decision date.
- Use phased scope to reduce perceived risk.
- Close on success criteria, governance and next expansion review, not only signature.

15. Account expansion

- Quarterly value review for strategic accounts.
- Map adjacent business units and transformation programmes.
- Cross-sell relevant products.
- Convert project estates to managed infrastructure/support.
- Use customer feedback to improve service packages and product positioning.

16. Partnerships

- Cloud and platform ecosystems.
- Insurance / Guidewire / Duck Creek ecosystem.
- Healthcare technology and EHR ecosystem.
- Local UAE/Gulf technology and advisory partners.
- Specialist recruiters / staffing channels where augmentation is a route to account entry.

17. Sales-team design

Stage	Team
0-3 months	Commercial/GTM lead + founder/technical leadership + shared solution support
3-6 months	Add 1-2 BDR/SDR resources and AE capacity only after repeatable ICP/message evidence
6-12 months	Vertical/market AEs, customer success, partnerships and RevOps based on conversion data

18. 30 / 60 / 90 / 180 / 365 plan

Period	Objective
0-30	Audit current clients/pipeline, validate services plays, target accounts and CRM stages
31-60	Launch US/UK/UAE/India priority campaigns and partner motions
61-90	Build qualified pipeline, proposals and first wins; identify highest-converting plays
90-180	Document repeatable playbooks, expand accounts and add justified sales capacity
180-365	Scale vertical/market coverage, managed revenue, forecasting and customer success

19. KPI system

Area	Measures
Acquisition	Tier-A accounts, executive conversations, discovery meetings
Pipeline	Qualified opportunities, value, coverage, stage velocity
Sales	Proposal-to-win, average deal value, sales cycle, bookings
Services	Margin, utilization, delivery-to-expansion conversion
Expansion	Cross-sell, repeat business, managed attach, NRR where applicable
Team	Pipeline/revenue per seller, ramp time, activity-to-opportunity conversion

20. Relevant experience mapping

- Guidewire and Java resource augmentation: insurance technology, specialist staffing and customer engagement.
- Openlink ETRM and Java: niche engineering resource requirements and energy technology.
- B2B marketplace and AI translation: custom platform and AI solution selling.
- TC+LIMS: product GTM, workflow discovery and product-market feedback.

21. Revenue planning

Build all forecasts bottom-up from actual account universe, average contract value, stage conversion, sales cycle and available selling capacity.

Planning assumptions are illustrative only and must be validated against The Algorithm's actual pricing, pipeline, customer base, margins and conversion data before being used as forecasts or commitments.
