

THE ALGORITHM

Regure GTM Playbook

Insurance operations, MGA and core-ecosystem account strategy from workflow wedge to enterprise expansion.

GTM INTELLIGENCE LIBRARY

Confidential strategic working document. Verified company information, proposed GTM strategy, personal experience and illustrative planning assumptions should be distinguished when used externally.

1. Product understanding

Regure should be positioned as an insurance operations and intelligence layer that can automate claims, documents and related workflows while coexisting with established core platforms. The strongest commercial wedge is modernization without forcing a core replacement.

Enter through one operational workflow the buyer can measure, prove the value using real customer documents/processes, integrate with the core where needed, then expand across lines of business and engineering services.

2. Commercial problem

- Claims backlog and slow cycle times.
- Email/PDF/spreadsheet-driven insurance operations.
- Manual document classification and extraction.
- Disconnected workflows around Guidewire/Duck Creek/Sapiens/other cores.
- SLA monitoring and assignment friction.
- Multi-region / regulated operational requirements.

3. Ideal Customer Profile

Priority ICP	Why it matters
MGAs / Lloyd's coverholders	Fast-changing operations, delegated authority and workflow/document complexity.
TPAs	Claims-heavy operations with SLA and assignment pressure.
Specialty insurers	Operational complexity without the scale of large-core transformation programmes.
Brokers / reinsurance brokers	Document-heavy workflows, collaboration and reconciliation.
Mid-market carriers	Opportunity to automate around existing core systems without replacement.

4. Buying committee

Persona	Primary concern
CEO / COO	Operating leverage, speed, scalability and cost
Chief Claims Officer / Head of Claims	Cycle time, backlog, assignment, leakage and service
Underwriting Operations	Submission/document processing and workflow control
CIO / CTO / Architect	Integration, security, data and core-system coexistence
Risk / Compliance	Auditability, governance and regulated workflow

5. Trigger events

- Guidewire or core-system transformation.
- MGA launch or rapid book growth.
- New line of business.
- Claims backlog / catastrophe event.
- Acquisition or integration programme.
- AI / automation mandate.
- Regulatory or audit pressure.

6. Positioning and message architecture

Do not lead with “replace your core.” Lead with “keep the core, automate the operational layer around it.” For smaller insurers/MGAs, the broader platform can become the operational system; for larger carriers, start as an extension/integration layer.

7. Competitive frame

Competitor / category	How to position
Guidewire	Position as complementary operational automation / integration rather than direct replacement in large accounts.
Duck Creek / Sapiens	Same coexistence strategy; identify workflow gaps around the core.
Claims AI point tools	Differentiate with broader workflow, documents and operational context.
Generic BPM/document tools	Emphasize insurance-specific workflows, auditability and domain fit.

8. Market strategy

Market	Priority	Initial play
United States	P1	MGAs, TPAs, specialty carriers, regional insurers
United Kingdom	P1	Lloyd’s ecosystem, coverholders, MGAs, brokers, specialty insurance
UAE/Gulf	P2	Insurers/TPAs/brokers requiring modernization and regional compliance
India	P3	Selective insurers/TPAs; prioritize services/integration opportunities where fit is stronger

9. Account-selection model

Score every account on ICP fit, active trigger, identifiable pain, access to buying roles and account-expansion potential. Prioritize a small number of high-fit accounts before scaling outbound volume.

Factor	Weight	What good looks like
ICP fit	25%	Strong industry, size and operating fit

Factor	Weight	What good looks like
Trigger	25%	Visible reason to act now
Pain	20%	Measurable operational or financial problem
Access	15%	Reachable buying committee
Expansion	15%	Potential for wider product/services footprint

10. Sales motion

- Build named accounts around operating model, core technology, lines of business and transformation signals.
- Lead with a specific workflow wedge: claims, documents, policy comparison/renewal or MGA operations.
- Use the customer's documents and process in the working session.
- Validate integration and security early.
- Pilot one workflow, then expand to additional functions and core-system integration.
- Cross-sell engineering, AI, compliance, cloud and managed services.

11. Discovery framework

- Which core systems are systems of record?
- Where do email, PDFs and spreadsheets remain in the process?
- What volume flows through the target workflow?
- Where are claims or policy operations delayed?
- How many handoffs and approvals exist?
- Which regulatory/audit evidence is difficult to produce?
- What transformation programme is already funded?
- What does a successful first phase need to prove?

12. Qualification

- Operational pain attached to budget/initiative.
- Executive/functional sponsor.
- Clear workflow and data scope.
- Integration/security feasibility.
- Pilot success criteria.
- Expansion opportunity beyond one workflow.

13. Demo / workshop / pilot

- Use real customer documents/processes when permitted.
- Show current-state versus automated workflow.
- Demonstrate integration/coexistence with the current core conceptually.
- Pilot a contained workflow with volume and SLA metrics.
- Include auditability, controls and exception handling.

14. Commercial model and business case

- Price against workflow value, complexity, modules, configuration and integration rather than seats alone.
- Build business case around processing time, manual effort, cycle time, capacity and error/compliance exposure.
- Separate platform, implementation/integration and optional engineering value where appropriate.

15. Objection handling

Objection	Response direction
"We already have Guidewire."	That is the point: position Regure around the manual/document/workflow layer Guidewire does not need to replace.
"Core-system change is too risky."	Propose coexistence and one contained workflow rather than replacement.
"AI cannot make claims decisions."	Define human-in-loop controls, approval boundaries and audit trail.
"Integration will take too long."	Scope only the minimum integration required for the first workflow and prove before widening.

16. Closing strategy

- Confirm the quantified problem and success criteria before commercial negotiation.
- Map procurement, security, legal and executive approval early.
- Reduce decision risk with a clear first phase, milestones and governance.
- Before signing, define the likely expansion path if the first phase succeeds.

17. Partnerships and channels

- Guidewire / Duck Creek / insurance consulting ecosystems.
- MGA and Lloyd's advisory networks.
- Claims transformation consultants.
- System integrators that need faster workflow/document capability.

18. Expansion and cross-sell

- Additional claims workflows / lines of business.
- Core-platform integration and engineering.
- AI/document automation.
- Regulatory intelligence / compliance engineering.
- Cloud and managed infrastructure.

19. 30 / 60 / 90 execution

Period	Focus	Outputs
['0-30 days', 'Validate insurance wedge', 'Audit current product traction, choose 2-3 ICPs, map core-system ecosystem, define workflow assessment']	['31-60 days', 'Activate', 'US/UK named-account campaigns, partner outreach, discovery and customer-document workshops']	['61-90 days', 'Prove', 'Pilot/proposal pipeline, technical validations, identify fastest-converting workflow and core ecosystem']

20. KPIs

- Tier-A insurance accounts.
- Executive/claims conversations.
- Workflow workshops.
- Pilots launched.
- Pilot-to-production conversion.
- ACV by ICP.
- Expansion modules / LoBs.
- Integration-led services pipeline.

21. Relevant commercial experience

- Guidewire/Java resource-augmentation experience creates direct credibility in the insurance core ecosystem.
- Experience in technical resource requirements supports complex stakeholder discovery.
- End-to-end account-management experience supports expansion after first deployment.

22. Revenue planning principle

Start with bottom-up pipeline math: target accounts → conversations → qualified opportunities → pilots/proposals → wins → expansion. Do not commit to revenue without validating actual pricing, baseline conversion rates and sales capacity.

Planning assumptions are illustrative only and must be validated against The Algorithm's actual pricing, pipeline, customer base, margins and conversion data before being used as forecasts or commitments.
